

🔍 SUMMARY

IT leader who owns infrastructure, business systems, and security, and who leads AI strategy and adoption with clear governance. Five years as the hands-on owner of IT at Bay East Association of REALTORS®, one of the largest REALTOR associations in the Bay Area. Administer iMIS, serve as technical lead on the Sage Intacct implementation, support a mixed Windows and Mac fleet, and build the integrations and internal tools that connect it all. Comfortable setting the plan and fixing the problem myself in a lean IT environment.

⚙️ CORE SKILLS

BUSINESS SYSTEMS AND ERP	Sage Intacct (implementation team), iMIS on SQL, API and webhook integrations, reporting, Power BI, user access
INFRASTRUCTURE AND SECURITY	Cisco firewalls, Ruckus access points, redundant dedicated connectivity, CrowdStrike, Windows Defender, KnowBe4 security awareness training, backups, RingCentral VoIP
ENDPOINT AND CLOUD	Intune, NinjaOne, Datto, Microsoft 365, Azure AD (Entra ID), Okta, G-Suite, Windows and macOS, audio/video systems (Nureva)
DEVELOPMENT AND AUTOMATION	Node.js, JavaScript, Python, SQL, PostgreSQL, HTML, CSS, Bootstrap, REST APIs and webhooks, GitHub for version control, WordPress, domains, SMTP and email relays
PROCESS AND DOCUMENTATION	IT policy writing, staff and industry training, ticketing, asset inventory, new hire onboarding, Jira, Confluence, project management, Slack and Zoom for team and vendor communication

📁 PROFESSIONAL EXPERIENCE

IT Administrator

July 2021 to Present

Bay East Association of REALTORS®

BUSINESS SYSTEMS AND INTEGRATIONS

- Led the migration from a homegrown SQL-based system to iMIS, including data migration, planning, implementation, and staff training, and now administer iMIS with full responsibility for user access, reporting, and data quality.
- Technical lead on the Sage Intacct implementation team, covering integration, configuration, and staff education, building in-house expertise so most questions are resolved before escalating to the vendor.
- Built API and webhook integrations that move data to vendors and third parties at the state and national level and replaced manual processes.

AI STRATEGY AND ADOPTION

- Led AI strategy and adoption: built Ursa AI, an internal AI platform (Node.js, Python, PostgreSQL, GitHub) now used regularly by staff, as sole developer and administrator.
- Authored the organization's AI use policy, covering an approved-tools list, data classification rules, vendor security review, new tool and integration approval, incident reporting, and record retention.
- Developed a public-facing chatbot with live staff handoff and a custom single sign-on plugin for the member portal.

ENDPOINTS, CLOUD, AND SECURITY

- Support a mixed fleet of about 75% Windows and 25% macOS devices, managed through Intune, with NinjaOne for monitoring, patching, and remote support on both platforms.
- Configured laptops with no local accounts, so every sign-in uses an organizational identity for centralized access control and offboarding.
- Redesigned backups for our scale: Intune policy defaults user data to OneDrive and Datto backs up Microsoft 365, replacing Carbonite endpoint backups.

- Migrated from Datto RMM to NinjaOne; layered endpoint security with CrowdStrike and Windows Defender.
- Streamlined the Microsoft cloud environment, including Azure AD and Okta, and implemented and manage KnowBe4 for ongoing staff cybersecurity education.

NETWORK, SUPPORT, AND WEB

- Manage the network, including dedicated IPs for primary and backup connectivity, Cisco firewalls, Ruckus access points, and the RingCentral VoIP phone system.
- Built a custom ticketing system embedded in the tools staff already use, keeping support work tracked with low friction.
- Manage IT assets and licensing and built the new hire onboarding process.
- Led upgrades of the conference room AV systems, including cameras, Nureva microphones, and audio, with room setups designed to be easy for outside guests, and serve as AV owner.
- Lead and maintain the organization's WordPress websites, including development, plugins, domains, and SMTP servers.
- Use Jira and Confluence for project tracking and documentation.
- Deliver technology training and talks for both staff and real estate professionals.

Independent IT Consultant

November 2020 to Present

Medical Group, Philippines | Part-time, ongoing | Annual retainer

- Trusted technology advisor to the board of directors on technology and innovation strategy, including standard device selection, Microsoft 365 and SharePoint setup, paperless application and receipt processes, and network security (firewalls, VPN, VLANs, per-department subnets).
- Created Zoom and Teams training videos, deliver monthly department training as needed, and guide two on-site entry-level IT staff.

Golden Gate National Parks Conservancy

Social Science Technician

July 2020 to December 2020

- Collected field data at park sites and built and optimized SQL reports and queries that improved data retrieval and reporting efficiency.
- Used Power BI and Microsoft 365 (Excel, SharePoint) to display and analyze data and to collaborate, and worked with biologists, historians, and cultural resource specialists to fold social science data into park management strategies.
- Prepared reports, presentations, and visualizations that supported management decisions.

Operations Associate / Staff

November 2015 to July 2020

Alcatraz Island

- Part of the team that ran island operations and shaped the visitor experience, helping develop a new category of premium, immersive visitor experience that increased the revenue the island receives from its visitor programs and is still offered today.
- Managed multi-million-dollar contracts with third-party vendors, ensuring cost-effective solutions and high-quality island maintenance.
- Wrote standard operating procedures for safety protocols and for the visitor experience.
- Led workflow improvements on the computer side and across other processes to improve services and efficiency, including the move from Microsoft Office applications to Confluence, and served as the go-to resource for technology projects such as the internet provider and landline to VoIP conversion.

ADDITIONAL INFORMATION

Certifications in progress: CompTIA A+, CompTIA Security+, and Microsoft Full-Stack Developer Professional Certificate. Comfortable with hands-on, on-site work, including equipment setup, field technology, and moving between locations. Professional references available upon request.
